Coroplast® Smooth™

Corrugated Plastic

Reduce: Coroplast's twin-wall fluted structure produces strength and rigidity at a lower weight, thereby reducing the amount of material required.

Reuse: The durability of Coroplast in outdoor use and in packaging applications means it can be used longer and reused over and over enabling a longer useful life.

Recycle: Coroplast uses polypropylene copolymers which makes for easy recycling at the end of their useful life. Polypropylene, being a polyolefin, recycles in processing streams such as plastic milk cartons and detergent bottles. Contact your local plastics recycling center for local information on polypropylene recycling.

Coroplast introduces Coroplast Smooth™, a polypropylene copolymer co-extruded twin-wall fluted sheet. Coroplast Smooth™ is UV stabilized and corona treated. Coroplast Smooth™ is ideal for digital flatbed printers for high quality graphics. It is water and stain resistant.

Graphic houses are using Coroplast Smooth™ successfully with: P.O.P. displays, indoor graphic displays, retail signs, real estate signs, campaign signs, bus signage, special event advertising and trade displays.

it's *now* easy being green
